PROJECTS

Perfume Store – E-Commerce Web Application

- Developed a full-stack perfume e-commerce website using React for the frontend and Node.js with Express.js for the backend, with data stored in PostgreSQL.
- Implemented secure authentication using Firebase Authentication and integrated email services using Nodemailer for order confirmations and customer communication.
- Built separate user and admin portals enabling features such as product management, order processing, and user management with a modern UI/UX design.
- Deployed the application live in real time, featuring an integrated admin dashboard for complete store control.

Simon Game – Memory Based Web Game

- Developed an interactive Simon Game using HTML, CSS, and JavaScript, providing a memory-based gameplay experience with visual and audio feedback.
- Implemented dynamic game logic and score tracking, enabling users to test and improve their memory skills in a responsive and engaging interface.

Shoe Store – E-Commerce Web Application

- Developed a fully functional and interactive shoe store website using React for the frontend and Node.js with Express.js for the backend, with data stored in PostgreSQL.
- Built product browsing, cart management, and checkout features with a clean UI/UX,
- Used Git and GitHub for version control throughout the development process.

Voice Assistant – Python Application

- Developed a voice assistant in Python capable of recognizing and responding to voice commands for performing various tasks such as web searches, system operations, and information retrieval.
- Utilized Python libraries for speech recognition and text-to-speech conversion, providing a seamless and interactive user experience.

Restaurant Management System – Python Application

- Created a robust restaurant management system in Python, enabling efficient order processing, inventory management, and customer management.
- Designed a structured data management layer to handle menu items, customer records, and order history, streamlining day-to-day restaurant operations.

Chat Hub – C++ Application

- Developed a chat hub application using C++ with an integrated graphical user interface, enhancing user experience and communication functionality.
- Implemented real-time messaging features with structured data handling and applied object-oriented programming principles for modularity and scalability.

Library Management System – C++ Application

- Created a library management system in C++, streamlining book tracking, lending, and inventory management processes.
- Designed data structures for managing member records, book catalogues, and due-date tracking, with a clean console-based interface for efficient library operations.
